

# BOOMS

nochar's **A674 Petro Bond Booms™** are designed for easy deployment and can be linked together for larger spills. Each boom comes complete with hardware to allow an overlap hookup to prevent seepage. **nochar's A674** not only helps control the spill but will also pick up and bond at the same time. After bonding, **nochar's A674** boom will continue to float.
