

SOCKS

nochar's A600 Series Socks (A672 and A673) are similar to the pillows in their environmental safety and the use of natural recycled materials. nochar's A672 Sock™ is designed to repel water and attract petroleum-based liquids. Wherever hydrocarbons are used, stored, consumed, transferred or transported there is a need for bonding agents. The convenient sock allows you to form barriers as a preventative measure and to quickly react to an emergency. Every industrial operation has multiple uses for the socks. The socks can be used on or around equipment, protection for floor drains and runoff areas. Common sense and practicality will dictate the use in other areas. nochar's A673 Sock™ is for non-aggressive spills such as water, non-hydrocarbon liquids or contaminated water spills where the entire spill needs to be contained for removal.

CUSTOM SIZES OF ALL nochar's 600 SERIES™ PRODUCTS ARE AVAILABLE AS SPECIAL ORDER ITEMS, CONSULT YOUR REPRESENTATIVE FOR PRICING.
